Datasheet

SECURITY ADVISORY SERVICES

Our experts shall review the organization's infrastructure, architecture, and design and keep an eye on all security issues arising in the industry which may impact the customer. We work to collect, analyze, prioritize, contextualize and summarize global, geographical and vertical threat and vulnerability issues to provide actionable security advise relevant to the business, it's infrastructure, processes and applications This way our team can give the right advice on any new zero days shows up, threat acts on peer organizations etc. This is a highly customized service, where our experts review every new security issue in the context of the customer. This will be an advisory which provides information about:

- The issue and its way of impact
- How it can affect customers
- How fast does the organization react to it
- What is the first level defense available to a customer
- What is the permanent fix, and how to apply it.
- How to check whether customer impacted by it already or not
- Incident response actions in case if affected.

Monitoring the Security Intelligence Events	→	Evaluating the Security Intelligence Events	→	Prioritizing Security Intelligence Events
Follow-up and Monitoring	←	Release the advisory to organization	←	Defining actions as per Organization Context
